1 17. A computer code that computes an average bits/frame (BA) for frames extracted from a
2 buffer used for video encoding and decoding, each said frame having a variable number of fields,
3 said BA a function of BA1 and BA2, said BA1 defined as an average bits/frame for a two-field
4 frame, said BA1 equal to $(BR + BR1/J1)/J2$, said BR1, J1, and J2 each a positive integer, said
5 BR a bit rate in bits/sec, said BR1/BR a positive integer, said BA2 defined as an average
6 bits/frame for a one-field frame, said BA2 equal to $(BR + BR1/J1)/(2*J2)$, said computer code
7 including an algorithm, said algorithm programmed to:

8 determine BR1, J1, and J2 such that $J2/(1+(BR1/BR)/J1)$ as evaluated in floating point is
9 approximately equal to FR, said FR a frame rate in frames/sec;

10 calculate a quotient Q1 and remainder R1 from integer division $BR1/J1$;

11 calculate a quotient Q2 and remainder R2 from integer division $(BR+Q1)/J2$;

12 calculate a quotient Q3 and remainder R3 from integer division $(BR+Q1)/(2*J2)$;

13 initialize to zero accumulators A1, A2, B1, and B2;

14 execute N iterations, wherein $N > 1$, said iteration n of N relating to extracting a frame n
15 from the buffer, wherein to execute iteration n includes:
